DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

1. Claims 1-4 and 6 are rejected under 35 U.S.C. 102(a) as being anticipated by Simonson (6,458,061).

As to claims 1-4 and 6, Simonson discloses an exercise drawing assembly as substantially claimed comprising two controlling members having a plurality of openings (76) at substantially equal intervals, two hollow core arms (12,14) that include a positioning member/bolt (80) and a pulley (182) pivoted to the distal end of each arm wherein the arms are capable of receiving a rope having one end connected to a burden assembly (32) and the other end connected to a holding member/grip (30) to allow for weight related exercise (see Figs. 1-3 & 5).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Simonson (6,458,061) in view of Sechrest et al. (6,488,612).

As to claim 5, Simonson discloses an exercise device as described above. Simon does not disclose that the distal end of the rope is provided with a chain that connects to a holding member or grip. Sechrest et al. disclose a similar exercise device wherein the distal end of the rope includes a chain that is connected to a handle (see Fig. 1). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to add a chain to the end of the rope to provide for a reinforced connection between the rope and the handle.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hoecht et al. '877 disclose an exercise drawing assembly that includes a rope having at its distal ends various connection means to a handle.
